

SEATTLE PACIFIC & EASTERN RAILROAD

The **4D HO Modular Group** has approximately 15 participating members. The Group's operating equipment includes a yard with a wye entrance, an engine facility module with an operating roundhouse, eight corner modules, a bridge access module and power source. Each of our members builds and maintains a module or modules which can be joined together with the Group equipment into a layout to complete the **Seattle Pacific & Eastern Railway**. The Group runs in HO scale with DCC on NEC controllers. There is no single theme for modules. A member may model any theme that suits the member.

A current calendar of the Group's activities is available from the navigation bar. Activities include: Monthly breakfast meetings which are open and at which a program is presented. Participation in shows where the Group layout is set up and members operate their own rolling stock. A program for limited guest operation when the layout is set up. Activities take place in the greater metropolitan Seattle-Tacoma area.

The Group requires membership in the NMRA. To become a member the simply complete, sign and submit both the Membership Application and the Member Accord which are available from the navigation bar. To maintain Group membership NMRA membership must be kept current. Although members are expected eventually to build and operate one or more modules, module ownership is not a requirement to join or maintain membership in the Group. There is a mentor program to assist new members.
